

MILLSREEF

Paul McEvoy, Manager, Mills Reef Vineyards, Hawkes Bay

"We have been following BioAg programs for the past three seasons (now six vintages since 2007) and have noticed a significant increase in both plant and soil health. Plants appear more disease resistant and the soil biology and humus content have increased hugely even in our extremely stony ground. Quality increases have also been significant in the final product with grapes being more balanced, with lower acids, higher brix and better overall colour".

Tim Preston, Winemaker, Mills Reef Winery

Mills Reef looked to BioAg systems to improve the general health of our vineyards.

The improved vine health was evident after just one season of taking the BioAg approach and it has continued to improve.

We are now receiving fantastic balance in our incoming fruit, high acid high PH in our grapes is a thing of the past.

It is obviously a combination of factors that bring us these results, but I feel BioAg plays a major roll.

A bottle of Mills Reef Elspeth Chardonnay wine is shown in the background, slightly out of focus. The label features the Mills Reef logo and the text 'ELSPETH CHARDONNAY'.

A bottle of Mills Reef Reserve Pinot Gris wine is shown in the foreground, in focus. The label features the Mills Reef logo and the text 'RESERVE PINOT GRIS'.

HAWKES BAY

NEW ZEALAND WINE

Better soils • Better vines • Better fruit
