Tararua Effluent Irrigation Specialists

Tony Robinson BioAg Biological farm advisor for the Horowhenua region met up with Duncan Powell from Tararua Effluent Irrigation Specialists while he was cleaning Bill Hunt's Ratanui Farms effluent pond near Otaki early 2013.

Duncan offered these comments:

- Cleanest pond he has ever seen, no effluent left on pond walls.
- No Smell when he pumps out makes this task easier when close to housing.
- Water is clear, not black and does not leave a black film over pasture.
- His hands are not stinky after loading up equipment when finished.
- Once pond is up and working properly he does not have to use pond stirrer – saving to farmer.
- Pumping time has been reduced on Bill's place by 25-30% as liquid moves more easily. – saving to farmer

Ratanui Farm has been using BioAg DFD effluent treatment since 2008. Ratanui has also run the full BioAg fertility system across the entire farm since 2008.
